Git commands

```
cat /etc/os-release
```

```
sudo dnf install git -y
```

```
git --version
```

```
git -v
```

```
git config --list
```

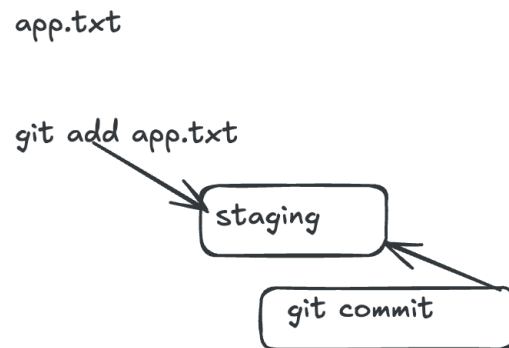

```
git config --global user.name "Dev-user"
```

```
git config --global user.email "abc@gmail.com"
```

```
git config --global user.name
```

```
git status
```

Branch

`git add app.txt`

`git commit -m "V 1"`

`git log`

`git log --oneline`

`git branch`

`git branch --show-current`

`git branch -M "name"`

`echo "hello " >>app.txt`

`git diff id-1 id -2`

`git revert comit-id` --create new commit id : history preserved

`git reset --hard commit-id` -move the current branch back to a commit and discard working tree
